2010 Intermountain GIS Conference

Challenges for a Changing World

April 19-23, 2010

Bozeman • Montana

2010 Intermountain GIS Conference

Challenges for a Changing World

April 19-23, 2010

Bozeman • Montana

You are cordially invited to join us in Bozeman, MT, April 19-23, 2010, for the Annual Regional MAGIP Conference.

We are proud to be hosting the conference and have lots of fun things planned and have expanded the conference to fill the entire week. We've added more workshops and even some "mini-conferences" because we are all faced with so many different "Challenges in a Changing World"!!

You will have a chance to meet and greet some of our locals at Public Night. We're hoping for some student presentations as well as live demonstrations of "GIS in Action" from vendors and users.

We are working on plans to get you "out and about" to see some of sights of Bozeman, home of Montana State University Bobcats, including a tour of the Museum of the Rockies and a visit to historic downtown.

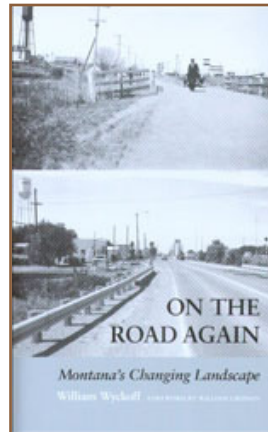

Guest Speaker:

William Wyckoff

We have invited MSU Professor of Geography, William Wyckoff to be our featured speaker.

William's interests focus on the historical and cultural geography of the Rocky Mountain West. His recent projects include "On the Road Again: Montana's Changing Landscape", a book of rephotography focused on changes to Montana's cultural landscape, and "2009 Diversity Amid Globalization: World Region, Environment, Development". Colorado has been another setting for several projects that center around the process of human landscape evolution in the West. He has also co-authored two textbooks on world regional geography.

MUSEUM OF THE ROCKIES
Montana State University
touch history

The Museum of the Rockies in Bozeman is home to a world famous collection of dinosaur fossils and paleontology program. Dinosaur fossils are found in Montana rocks from the Jurassic and Cretaceous periods. Dinosaur dig crew led by paleontologist and curator Jack Horner, science advisor to the Jurassic Park films, excavate fossils which are prepared and studied at the Museum in Bozeman. Some of the most famous dinosaurs in the world such as Tyrannosaurus rex, Triceratops, and Deinonychus can be seen on display.

You'll also have an opportunity to experience the award-winning changing exhibit, Survivor: Jamestown, where turning one corner in the maze can mean the difference between life or death. This interactive, immersive, and educational maze experience is set in the original 1607 Jamestown, Virginia colony. Presenting a glimpse into the struggles of the New World settlers, this exhibit engages visitors in a quest to survive the conditions that only 38 of the original 104 colonists were able to endure for one year. Melding historical accuracy and the complexities of real life and death decisions, Survivor: Jamestown delivers a truly unique and effective learning experience.
